

Surfaces that do not facilitate the growth of bacteria mould or fungi can be an integral part of minimising health risks in built environments for the medical sector.

ClimateLine® is a New Zealand product which is a world first, pre-finished wall lining system that will reduce human exposure to bacteria on wall surfaces and assist during the building process by eliminating patient exposure to dust and paint fumes, especially during renovations.

The permanent anti-microbial additive is efficacious against a broad range of microbes including: MRSA, Ecoli, Fungi, Mold, Yeast, Algae

Developed in conjunction with the science of DuPont Powder Coatings.

ClimateLine® anti-microbial wall lining
your insurance policy against the spread of infection

If you are building, specifying, renovating or in charge of the welfare of staff and patients, then see how we can create a safer built environment.
